BODY PARAMETERS	
Body weight	[0][8][9].[4][2] kg

Ojas Multispeciality Hospital			
Protocol No.	ICR/24/001	Screening No. [0][3][0][1][3]	
Patient Initial:	[S][S][S]	Visit 2	Randomization/Baseline Visit: Day 1 (Week 0)
Visit Date		[2][5][1][1][2][5] DD MM YY	

INCLUSION CRITERIA				
S. No.		Yes	No	N A P
1	Patients of either sex, aged 18 to 65 years and ready to give written informed consent to participate in the study.	☒	☐	
2	Willing and able to comply with all aspects of the protocol, including agreeing not to smoke during the study and demonstrating an ability to follow study procedures to the satisfaction of the Investigator/qualified designee prior to randomization.	☒	☐	
3.	Patient having a Computerized Tomography (CT) scan of thorax (within 1 year of Screening and after the onset of chronic cough) not demonstrating any clinically significant abnormality contributing to the chronic cough or any other clinically significant respiratory disease, in the opinion of the Investigator. (Note: If CT scan of the thorax not available at screening visit, then CT scan of thorax can be performed at Screening.)	☒	☐	
4	Patient with chronic cough (defined as duration of >8 weeks after onset of cough symptoms) for <12 months prior to the screening visit (i.e., <14 months after onset of cough symptoms), based on documented medical history of patients.	☒	☐	
5	Patient with diagnosis of refractory chronic cough or unexplained chronic cough as per the current American College of Chest Physicians (ACCP) guidelines: • Refractory chronic cough is defined based on: ➤ the patient has had a clinical evaluation that suggests a co-morbid condition that may be associated with chronic cough (such as gastroesophageal Reflux Disease [GERD], asthma, or upper airway cough syndrome [UACS]), AND ➤ the patient has received appropriate diagnostic work-up and at least 2 months of therapy for the co-morbid condition, prior to Screening, according to the current ACCP guidelines, AND ➤ the patient continues to cough despite being on therapy for the co-morbid condition. • Unexplained chronic cough (UCC) is defined based on: ➤ the patient has had a clinical evaluation of their chronic cough per current ACCP guidelines, AND ➤ the evaluation does not suggest a co-morbid condition that may be associated with chronic cough.	☒	☐	
6	Cough Severity Visual Analogue Scale (VAS) score of ≥ 40 mm at Screening and Randomization.	☒	☐	
7	Women of childbearing potential (WOCB) must have a negative urine pregnancy test prior to study entry and agree to use highly effective methods of contraception to prevent pregnancy from study entry till 2 weeks after the last dose of the study medication (such contraception may include hormonal birth control e.g. combined oestrogen and progestogen containing [oral, intravaginal, or transdermal] or progesterone only [oral, injectable, or implantable], intrauterine devices, intrauterine hormone releasing system OR bilateral tubal occlusion, vasectomized partner, or	☐	☐	☒

Visit Date		[24][ST][11][P][ST] DD MM YY	

EXCLUSION CRITERIA				
S. No.		Yes	No	NAP
1.	Patients with history of hypersensitivity to any of the study drug or to drugs of similar chemical classes or history of anaphylaxis or cutaneous adverse drug reaction (with or without systemic symptoms) to sulfonamide antibiotics or other sulfonamide-containing drugs	☐	☒	
2.	Patient who is current smoker or stopped smoking within 12 months of Screening	☐	☒	
3.	Prior smoking patients with smoking history greater than 20 pack-years (e.g., 1 pack [20 cigarettes] per day for 20 years)	☐	☒	
4.	Patient having a force expiratory volume (FEV ₁) /forced vital capacity (FVC) ratio <60%.	☐	☒	
5.	Patient with a history of upper or lower respiratory tract infection or recent clinically significant change observed in pulmonary status within 4 weeks of screening.	☐	☒	
6.	Patient with history of chronic bronchitis, defined as a cough that produces a clinically significant amount of sputum (greater than approximately 1 tablespoon of phlegm) that occurs every day for at least 3 months continuously.	☐	☒	
7.	Patient with estimated glomerular filtration rate (eGFR) <30 mL/min/1.73 m ² at Screening.	☐	☒	
8.	Patient with history of malignancy ≤5 years prior to screening (except patients with basal cell or squamous cell skin cancer or in situ cervical cancer treated completely).	☐	☒	
9.	Requires treatment with a therapy that does not adhere to the guidance parameters specified in Section 'Prohibited medications during study'	☐	☒	
10.	Patient who has previously received Gefapixant or other P2X purinoceptor 3 (P2X3) antagonists.	☐	☒	
11.	Patients with any abnormal laboratory values that are judged to be clinically significant at Screening [including, but not limited to: alkaline phosphatase (ALP) and/or, alanine aminotransferase (ALT) and/or aspartate aminotransferase (AST) >2 x ULN (Upper Limit of Normal); or total bilirubin > 1.5 x ULN; hemoglobin <10 g/dL, white blood cells (WBC) count <2500/mm ³ (<2.5 × 10 ³ /μL), neutrophil count <1500/mm ³ (<1.5 × 10 ³ /μL), platelet count <100 × 10 ³ /mm ³ (<100 × 10 ³ /uL).	☐	☒	
12.	Patient is currently enrolled in an investigational drug or device study.	☐	☒	
13.	Patient with history of participation in another clinical trial in the past 6 months prior to screening or planning to participate during the study	☐	☒	
14.	Patients with any clinically significant laboratory abnormalities/condition	☐	☒	

	which in the opinion of Investigator would compromise the well-being of the patient or the conduct of the study, or prevent the patient from meeting or performing study requirements.			
15.	Patient with any surgery or medical procedure planned during the screening, treatment or follow-up periods	☐	☒	
16.	Patients with known alcohol or other substance abuse within last one year	☐	☒	
17.	Employee of the Sponsor, Investigator, or study center, with direct involvement in the proposed study or other studies under the direction of that Investigator or study center, as well as family members of the employees of Sponsor or the Investigator.	☐	☒	
18.	Pregnant, lactating women or women who intend to conceive or women of childbearing age who are not willing to use an acceptable method of birth control during the study period.	☐	☐	☒

Based on the re-evaluation of Inclusion and Exclusion criteria is the patient Eligible to be randomized in the study? ☒ Yes ☐ No (If 'Yes', please perform assessments as per study protocol. If 'No', please do not randomize the Patient and fill the 'End of Study' panel)

Date of Randomization: 21/11/2025
DD MMM YY

Randomization Number: R0505 Time of Randomization 18:00 (24Hrs)
HH MM

Kit code No. K-0045

Date of IP Kit Dispensed: 21/11/2025

COUGH SEVERITY VAS		
Was Cough Severity was assessed via VAS? ☒ Yes ☐ No		
If Yes, Date of Assessment [2][5][1][1][2][5] DD MM YY		
	Range	Score
VAS Score	0 (No Cough) – 100 (Severe cough)	[0][6][7]

Note: If Cough Severity Visual Analogue Scale (VAS) score is less than 40 mm then please exclude the patient from the study

PATIENT DIARY DISPENSING	
Was patient diary (Enrolment) dispensed and training provided to the patient?	☒ Yes ☐ No

PATIENT DIARY REVIEW	
Was patient diary (Screening) reviewed and retrieved?	☒ Yes ☐ No
Average Daily Cough frequency since previous visit [1][0][0]	
Did the patient experience any adverse event since last visit? ☐ Yes ☒ No	
(Note: If Yes, please collect all the relevant information and record in Adverse Event panel)	
Did the patient take any medication since last visit? ☐ Yes ☒ No	
(Note: If Yes, please collect all the relevant information and record in Prior medication panel)	

STUDY DRUG ACCOUNTABILITY RECORD	
Was Study medication dispensed to the patient? ☒ Yes ☐ No	
Total No. of Tablets Dispensed	[1][0] Total No. of Tablets Consumed
Total No. of Tablets Returned	
Total No. of Tablets Misplaced/Lost	
% compliance for Tablets	
Treatment Compliant of Tablets Comments, if any
